Re: Letter of Recommendation – Nano Silver Technology Disinfectant supplied by BLP South Africa (Pty) Ltd.

We researched the market for an effective disinfectant/sanitizer to be used in our aircraft interior that are not harmful to humans and are also environmental friendly to ensure the safety of our passengers and personnel and will not have any adverse affects on the cabin interior.

From the specifications provided by BLP South Africa (Pty) Ltd we found Nano Silver Technology Disinfectant the sanitizer of choice.

We applied the sanitizer with the recommended HVLP machine and found the application to be smooth without any time wastage and the coverage proved to be satisfactory.

The sanitizer does not leave any residue on the interior surfaces or any bad odors that can be annoying to our passengers.

The sprayed surfaces dry quickly and evenly, and no streaks or marks were evident.

No evidence of corrosion or mold that is expected with water-based products was observed.

Based on the technical information supplied by BLP on Nano Silver Technology, and our experience after applying it in our aircrafts, we can highly recommend it as an effective sanitizer to the market.

We believe that our recommendation will be of assistance.

Yours faithfully
